

Exploration 27

Residential Workshop

1997 Website Program Description

The **Exploration 27** program is a week of pioneering, cutting-edge explorations and research. This residential program is open only to graduates of [Lifeline](#).

The itinerary for this week-long voyage into consciousness includes a systematic series of planned visits to Focus 27 to obtain information, data, and direct experience related to this different state of being. There are opportunities for extended communications with the residents there, and the possibility for developing relationships that may provide useful information. Participants are asked to gather information regarding the unique energy field of Focus 27, including historical data and artifacts that may be available. Adept explorers may be able to extend themselves beyond the Park area and discover other facets and patterns that may exist.

The first full day of the **Exploration 27** program is spent with the entire group listening to and de-briefing resets of Focus 10, 12, 15, and 21. After this reorientation, participants venture beyond Focus Level 21 into states of being just beyond physical life existence. Once thoroughly reacquainted with these realms, the pioneering begins. This program is truly research oriented. It is an opportunity for experienced voyagers to contribute to the body of knowledge regarding the dimensions beyond physical life existence.

Information collected by **Exploration 27** program participants will be collated with information from the [Lifeline](#) programs, the Lifeline research project being conducted by Dr. Rita Warren, and other reports.

If you have any questions regarding the **Exploration 27** Program,
please do not hesitate to contact the Institute.

We will be happy to hear from you.
